To whom it may concern

This is to confirm that the OJSC “Systemavtomatika” was contracted by UNDP Tajikistan to supply and installation of two grid off solar powered systems of electricity supply for BOMNAF Project. Two separate systems were installed in Border Crossing Point Jomarji Bolo and Border Outpost Kalai Zol, Badakhshan province of the Islamic Republic of Afghanistan for the Afghan Border Police under the EU funded project of Border Management in Northern Afghanistan (BOMNAF).

As selected through an open and comparative process, OJSC “Systemavtomatika” company delivered results in accordance with the Terms and Conditions of the contract and was always prepared to take on more responsibilities to correspond to the growing needs of the project beneficiaries in the field.

Although the mentioned installations are located in a fairly remote and isolated area all work related subjects were brought to our projects attention in best timely manner both verbally and in written form thus preventing unnecessary delays and possible misunderstandings.

The company performed to the norms of agreed international standards producing good quality of workmanship leading to successful completion of the both supply and installation in Djomarchi Bolo Border Crossing Point and Kalai Zol Border Outpost facilities in Afghanistan.

The BOMNAF project considers OJSC “Systemavtomatika” as an experienced company with sufficient technical and human capacity to execute similar projects in Afghanistan and Tajikistan.

Mr. William Lawrence,
Project Manager
